

Power Switches Stack

SCS Power

www.scspower.in

Description:

Our power switches stack is general purpose stack that have number of power switches leg and can be configured in any topology using the switches legs. These are customised and can be made as per requirements. It is particularly design for R&D and laboratory research purposes. It Increases demonstration time and reduce build up time. Encapsulated assembly makes it easier to work without having shock hazards.

Kit can consist of:

High power IGBT/MOSFET, SiC MOSFET half bridge legs (SCS-iPMHX-1250)

Power switches gate driver (SCS-GDHX-8004)

DC link capacitors

Snubber capacitors

Cooling arrangements

Voltage sensors board (SCS-SB-0400)

Current sensors board (SCS-SB-0004)

Please refer our standard products datasheet for detailed specifications.
